Gathering information

At the beginning of the first session ask the children to give a show of hands to answer these questions and record the numbers here for us. This will help you gauge the capabilities of your group and it's essential data for us too.

Hands up!

Count how many children

How many boys/girls?

How many have a computer at home?

How many have internet access at home (includes a smartphone or tablet device)?

How many have done some sort of programming before?

How many have used Scratch before?

(Ask the teachers) How many are high-, medium- or low-achievers?

Please fill in the online form we sent you with this data.
